EXPERIMENT-07

NAME:UMAR FAROOK K ROLL NO:240701573

Aim :

To design different app layouts using GIMP and evaluate user feedback on aesthetics and usability.

Introduction

User Interface design plays an important role in improving user experience. Colors, layout structure, and spacing affect how users interact with an application.

In this experiment, different color variations of the same UI layout are created using GIMP. These layouts are evaluated based on user feedback to identify the most effective design.

Procedure :

Step 1: Create New Project

- Open GIMP application
- Go to File → New
- Set canvas size to 1080 × 1920 pixels (mobile screen size)
- Click OK to create the workspace

Step 2: Design Base Layout

- Used Rectangle Select Tool to create sections for input fields and buttons
- Applied colors using Bucket Fill Tool
- Used Text Tool to add:
  - o Title (Welcome / Welcome Back)
  - o Email and Password labels
  - o Login button text
- Designed input boxes and buttons with proper spacing
- Organized all elements into separate layers for easy editing

Step 3: Create Colour Variations

- Duplicated the base layout using Image → Duplicate
- Modified background and button colors using:
  - o Bucket Fill Tool
  - o Colorize Tool
- Created three different layouts:
  - o Green theme
  - o Purple theme
  - o Orange theme

240701573

- Ensured all layouts have same structure but different color styles

Step 4: Export Layouts

- Go to File → Export As
- Saved each design as separate image files:
  - o layout1.png
  - o layout2.png
  - o layout3.png
- Selected PNG format for better image quality

Step 5: Collect User Feedback

- Shared all three layout images with users
- Asked users to evaluate based on:
  - o Visual appearance
  - o Usability
  - o Readability
  - o Color preference
- Collected responses and analyzed user opinions

Step 6: Analyze and Finalize Design

- Compared feedback for all layouts
- Identified strengths and weaknesses of each design
- Selected the best layout based on user preference
- Made final conclusion based on usability and aesthetics

User Feedback :

Layout 1 (Green Theme)

- The design looks fresh, natural and calm with a green background
- Provides a soothing appearance suitable for wellness or nature apps
- Text readability is good due to strong contrast on white card
- Suitable for eco-friendly or health-related applications
- Button visibility is clear and well defined

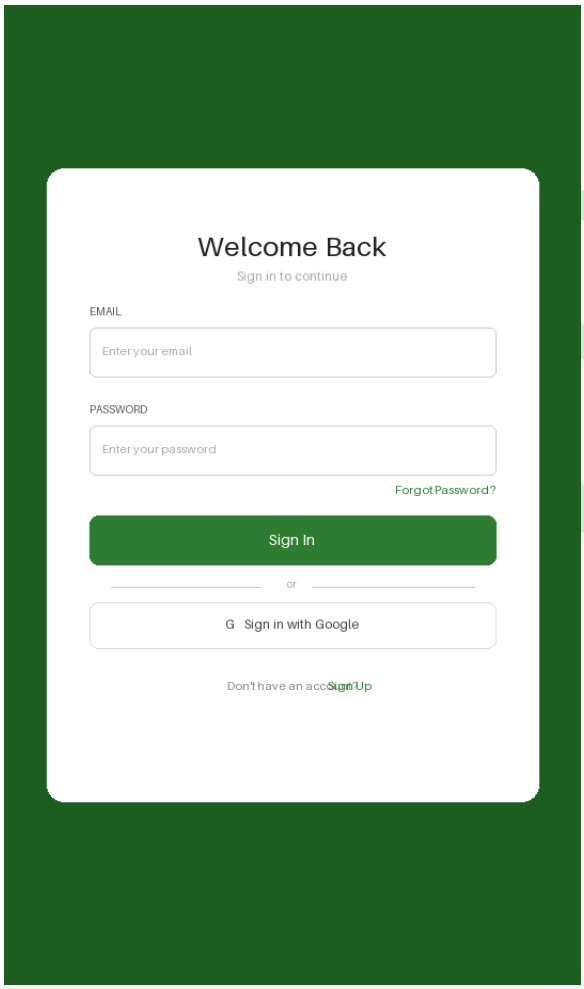
24070157 3

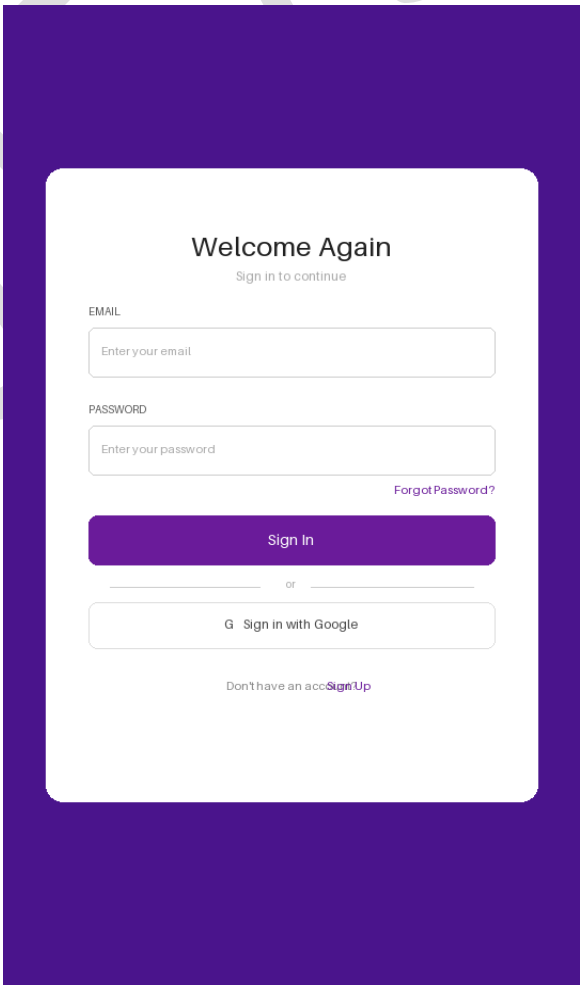
Layout 2 (Purple Theme)

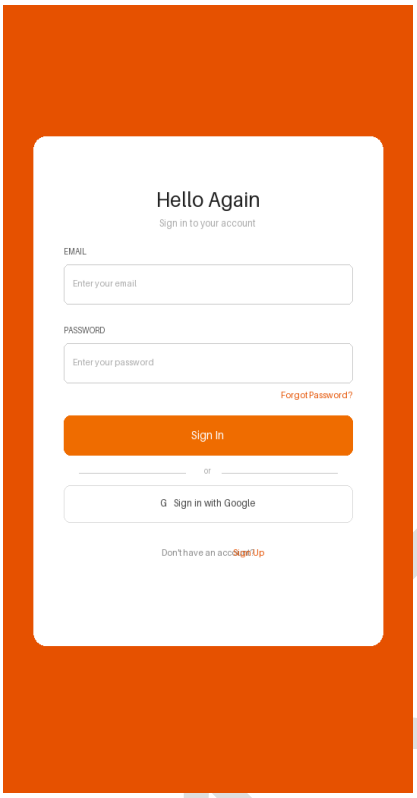
- The design is visually rich and conveys creativity
- Deep purple background adds elegance to the layout
- Provides strong emphasis on the login card area
- However, the bold color may feel intense for extended usage
- Minor spacing adjustments can further improve usability

Layout 3 (Orange Theme)

- The design looks warm, energetic and inviting
- Good contrast between background and white card improves readability
- Buttons and input fields are clearly visible and accessible
- Provides a lively and engaging viewing experience for users
- Consistent spacing and warm color usage enhances usability
- Most preferred layout among users







Result:

The experiment shows that color and layout significantly affect user experience. Among the three designs, **Layout 3 (Orange theme)** was selected as the best due to its warm appearance, good readability, and overall usability.
